R Basic Tableau with R

Dana(昱璇)

2018.6.25

為何有Tableau還需要R

Tableau

- ✓ Super-easy to use
- ✓ Beautiful visualizations out-of-the-box
- ✓ Very powerful
- ✓ Very fast
- ✓ Lots of data connectors
- ✓ Short learning curve
- ✓ Big community
- ✗ Data manipulation is a pain
- ✗ Limited to visualizations
- ✗ Sharing workbooks (for confidential data) is a challenge (expensive)

R

- ✓ Huge community
- ✓ Lots of libraries
- ✓ Can do pretty much everything
 - ✓ ?web extraction
 - ✓ machine learning
 - ✓ statistics (duh)
 - ✓ data visualization
 - ✓ interactive reporting
 - ✓ web-apps
- ✗ Difficult to learn
- ✗ Need to know/learn programming
- ✗ Errors are hard to pin-point

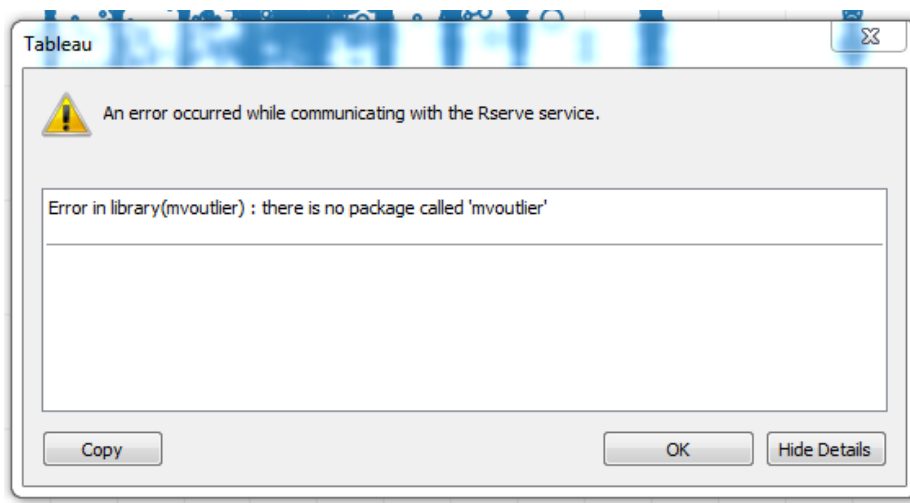

Dynamically recompute the results without manually having to recreate the data set for R

執行R程式碼，並到tableau啟動連線

記得要用的套件要先在R軟體安裝

以排除outlier案例來說，未安裝mvoutlier套件時，執行tableau outlier變數會出現該錯誤訊息

於Rstudio執行語法及安裝完成畫面

```
all.packages("mvoutlier")

6:1 | (Top Level) | R Script

Console ~/
package 'sROC' successfully unpacked and MD5 sums checked
package 'VIM' successfully unpacked and MD5 sums checked
package 'zCompositions' successfully unpacked and MD5 sums checked
package 'sgeostat' successfully unpacked and MD5 sums checked
package 'robCompositions' successfully unpacked and MD5 sums checked
package 'mvoutlier' successfully unpacked and MD5 sums checked

The downloaded binary packages are in
C:\Users\danahuang1\AppData\Local\Temp\Rtmp0q0LJ0\downloaded_packages
>
```

基本公式 (Tableau 8.1後版本)

依分析輸出的格式分為:

- SCRIPT_REAL –Decimal Number
- SCRIPT_INT – Whole Number
- SCRIPT_STR - Text
- SCRIPT_BOOL - True/False
- 以SCRIPT_INT為例

Clusters

Results are computed along Table (across).

```
SCRIPT_INT('result <-  
kmeans(x = data.frame(.arg1,.arg2,.arg3,.arg4), 3);  
result$cluster',  
SUM([Sepal length]),SUM([Sepal width]),SUM([Petal length]),  
SUM([Petal width]))
```

→ 'insert R script here'

→ [someTableauAggregateMeasure]

☺ 要會寫R code才能完整使用喔☺

Reference: <https://community.tableau.com/docs/DOC-5313>

基本語法彙整

- 各種靜態的表示法

test_real

Results are computed along Table (across).

```
SCRIPT_REAL('0.1',max(1))|
```

test_int

Results are computed along Table (across).

```
SCRIPT_INT('0.1',max(1))|
```

test_string

Results are computed along Table (across).

```
SCRIPT_STR('x<-"Hello world"',MIN(0))|
```

test_boolen

Results are computed along Table (across).

```
SCRIPT_BOOL('TRUE',max(1))|
```

R-Ladies Taipei

Let's Demo

案例分享-R與tableau分群比較

- 使用kmeans做分群 (使用iris Data)

Reference: <https://www.arkatechture.com/blog/ask-a-data-scientist-how-does-clustering-in-r-vs.-tableau-work>

案例分享-排除outlier

- 使用R套件區別outlier (使用Paris temperature Data)

Reference: <https://community.tableau.com/thread/138417>

案例分享-排除outlier

- 若無outlier，會出現此錯誤訊息
